

# Bring Augmented Reality to Your Classroom with iPad

## You're invited.

Firsthand experience is one the most powerful ways to learn. With Augmented Reality (AR), students can experience just about anything they can imagine. Join us to explore how AR on iPad is helping transform what is possible in the classroom.

During this webinar you will:

- Explore AR apps on iPad that are helping students connect to their learning to the world in new ways
- Discover how to create powerful interactive storytelling using AR Makr (grades K-3) and Reality Composer (grades 4-8)
- Learn how AR creates immersive and engaging learning experiences in contexts such as storytelling, maths and science.

Facilitated by Apple Professional Learning Specialist, Paul Hamilton, these sessions are sure to inspire.

## Foundational Program

This program is designed for new to Apple educators or those looking for a refresher course.

## What's coming in Term 2

In Term 2 we have a full range of programs for Early Years, Primary and Secondary educators covering creativity, augmented reality, technical tips and much more. Details will be released closer to the end of Term 1.

## Who should attend

K-8 educators interested in bringing Augmented Reality to the classroom.

## Choose your time-slot

The series is running twice to cater for different availabilities. Choose between the two options provided below.
